

For Immediate Release

She Cosmetic Surgery Offers ProFractional Laser Treatment

Minneapolis, MN, December 1st, 2009—Shu Cosmetic Surgery now offers the new state-of-the-art ProFractional Laser technology for those who wish to take on a younger facial appearance. This facial treatment is guaranteed to make anyone look several years younger—without surgical face lift.

ProFractional technology is designed to effectively treat wrinkles, acne scarring, hyperpigmentation, and improve skin tone and texture in a fast, comfortable, little down-time treatment. A full-face fractional laser resurfacing procedure removes the damaged skin surface and stimulates the growth of a new top layer, giving the individual a more youthful appearance.

“This procedure is quick and effective,” says Dr. Shu, medical director of Shu Cosmetic Surgery. “It's great for the weekend since you can get the treatment done on a Friday and be ready for the following week.”

In contrast to traditional CO2 laser peel, the recovery is much quicker. It is about three days comparing to several weeks with traditional CO2 laser peel.

The patients need to apply topical anesthesia cream at least thirty minutes prior to the procedure. The sensitive patients may consider combining topical cream with facial nerve blocking for more comfort.

About Dr. Shu and Shu Cosmetic Surgery

Shu Cosmetic Surgery is a leading cosmetic care center in Minnesota that provides patients with a wide range of cosmetic procedures, including liposuction, VASER High-Definition LipoSculpture, injectables and facial laser enhancements, and vein care. It is committed to providing improved quality of life through enhanced physical appearance.
