

For Immediate Release

Rejuvelaser Skin & Lipo Clinic Offers ProFractional Laser Treatment

Minneapolis, MN, December 1st, 2009—The Rejuvelaser Skin & Lipo Clinic now offers the new state-of-the-art ProFractional Laser technology for those who wish to take on a younger facial appearance. This facial treatment is guaranteed to make anyone look 5 to 10 years younger—without the use of injectables.

ProFractional technology is designed to effectively treat wrinkles, acne scarring, hyperpigmentation, and improve skin tone and texture in a fast, comfortable, little down-time treatment. A full-face fractional laser resurfacing procedure removes the damaged skin surface and stimulates the growth of a new top layer, giving the individual a more youthful appearance.

“This procedure is quick and effective,” top proceduralist Dr. Shu said. “It's great for the weekend since you can get the treatment done on a Friday and be ready for the following week.”

The Rejuvelaser clinic provides patients with a full range of cosmetic procedures, including liposuction, VASER High-Definition LipoSculpture, injectables and facial laser enhancements, and vein care.

With a complete array of injectables, laser enhancements, and body contouring options, the Rejuvelaser Skin & Lipo Clinic offers the most complete cosmetic care at three convenient offices—Edina, Crystal, and Shoreview.

Rejuvelaser Skin & Lipo Clinic is a leading cosmetic care center in Minnesota. Rejuvelaser is committed to providing improved quality of life through enhanced physical appearance, offering a complete range of services to communities within the Twin Cities with offices in Edina, Crystal, and Shoreview.
