

SCARLESS BREAST REDUCTION

Over time, your breasts can change due to aging, weight loss and gain, hormonal imbalances and gravity. Many women suffer from chronic health conditions due to a disproportionate amount of breast tissue in their bodies.

The size of your breasts should be proportionate to the rest of your body. Breast reduction is recommended for women whose breasts cause health and emotional problems.

Traditional breast reduction procedures are invasive and painful with longer recovery periods. Therefore, patients looking for a better option for breast reduction surgery should consider Scarless Breast Reduction.

Dr. Shu is pioneering a revolutionary method for removing unwanted fat, including fatty breast tissue that is causing you to have increased cup sizes. A highly effective method, Vaser or Laser technology allows for the removal of more fat from a targeted area with less risk than traditional liposuction does. The result is a more sculpted look with firmer, smaller, and rounder breasts that are proportionate to your body shape and size. Patients can typically return to normal activities in 1 week.

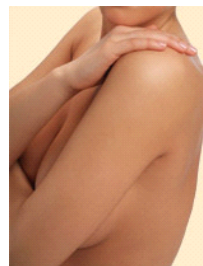

Through this procedure, patients will not only regain an enhanced appearance and self confidence, they will also reduce or eliminate any chronic health conditions that may have affected their lifestyles up to that point.

If you are suffering from the effects of large breasts, please schedule a complimentary consultation with Dr. Shu. He is the top proceduralist in the country who has pioneered the art of Scarless Breast Reduction with Vaser or laser technology. He looks forward to discussing with you the various options and will work

to develop a customized treatment plan that will leave you feeling lighter and rejuvenated in your new body.

Scarless Breast Reduction is the latest advancement in cosmetic breast surgeries—an innovative procedure designed to help women achieve smaller, firmer breasts without the risk of permanent scars associated with traditional breast reduction surgeries.

There is minimal postoperative pain or downtime, in addition to a rapid recovery. Fat components that tend to weigh larger breasts down are removed, allowing the breast tissue to shrink, lift, and reduce in volume. This procedure uses state-of-the-art ultrasound or laser technology designed to gently reshape your breasts. It allows for the ability to differentiate targeted fat from other important tissues, such as nerves, blood vessels and connective tissue. Smooth results and quick healing is guaranteed with this procedure.

Frequent Asked Questions:

How does Scarless Breast Reduction work?

This procedure uses an ultrasound or laser technology to target the area around the muscles of the breasts. The patient is first given the tumescent (local) anesthesia with IV sedation; a tiny incision is made so that a probe transmitting sound energy can be inserted to liquefy the fat cells. Once the fat has been dissolved, it is removed through a gentle suction process designed to minimize trauma to the surrounding tissue structures such as nerves, blood vessels and other connective tissues.

Who is an ideal candidate for this procedure?

While Scarless Breast Reduction can be performed on any woman seeking breast reduction surgery, it's best suited for younger patients with greater skin elasticity.

How soon will I see my results?

This depends on each patient's procedure. Typically, patients are able to see results immediately after the procedure, with final results appearing within 3 to 6 months. It is important that you establish realistic expectations through discussion with your doctor.

What is the recovery time?

Patients typically are able to return to work and normal activities within 3 days following the procedure.

How can I be certain Scarless Breast Reduction is right for me?

If you are in overall good health and are looking for a fast, low-pain solution to reducing fat deposits in your breasts, then Scarless Breast Reduction could be perfect for you. There are limits to the amount of fat that can be removed, If you have very large breasts, then the open breast reduction in combined with Scarless Breast Reduction will be better option. your doctor can assist you with your decision about anticipated results and the recovery process, as well as any other concerns you may have.
