

## Scarless Face Lift

As time passes and your life gets busier, the skin on your face and cheeks begin to show signs of wear. Have you ever wanted to take years off your face and look younger, but were too hesitant to undergo a major plastic procedure? More and more patients are looking for a less invasive treatment that can help them achieve tightness in their face and neck skin.

Laser-assisted scarless face and neck lifting is an innovative, effective, and safe liposculpturing procedure option for patients who wish to improve the laxity of their face and neck. Scarless face lifting is perfect for those who are looking to remove a small amount of fat in order to smooth contours and tighten skin.

Advantages of Scarless face lift:

- Minimal invasive office procedure
- Local anesthesia
- 1 hours laser assisted liposculpturing
- Facial contouring and skin tightening
- Improve both face and neck/Jowls
- no visible scar
- Minimal swelling and bruising

### Frequent asked questions:

#### **Who is an ideal candidate for a Scarless Face Lift?**

This procedure is suitable for both men and women. An ideal candidate is generally in good health and does not smoke. They should have localized areas of fat in the cheeks, jowl area and under the chin, in addition to having good skin integrity. Dr. Shu will examine your face and neck to determine if you are a good candidate for this procedure.

#### **Does the Scarless Face Lift replace a traditional facelift?**

No, but it offers a safe and viable alternative with similar results. Scarless Face Lift is minimally invasive and less traumatic to tissues than a traditional facelift is.

#### **How is a Scarless Face Lift procedure performed?**

The Face was sculptured with laser liposuction technique performed under a local tumescent anesthetic, 3 or 4 tiny incisions are made—one behind each earlobe, and 1 or 2 under the chin. A tiny laser probe used to liquefy the fat and heating the surrounding tissue. This heat leads to collagen formation and helps in skin and tissue tightening.

#### **What happens after the procedure?**

The patient will wear facial compression garment for 3 to 4 days after the procedure followed by nightly use only. Most patients experience mild discomfort at first and gradually feel better within 1 to 2 weeks. Patients are typically able to return to normal activities within 3 or 4 days following the procedure, and return to exercise and more strenuous activities within 2 weeks.

#### **How long dose the procedure take?**

About 1 hours

#### **When can I see results?**

Results can be seen within one week of the procedure with continued improvement over the next 4-6 months as tissues continue to tighten and heal.

#### **What are the possible risks and complications involved?**

The risks of Scarless Face Lift may include infection, bleeding, and allergic reactions to medications. Complications, although rare, can include skin contour irregularities, asymmetry, seroma (fluid collection under the skin), hematoma, skin loss, and skin burn.
