**Dr. Steven Shu Launches Lipoabdominoplasty,  
An advanced Type of Tummy Tuck - RejuveTummy™**

**Edina, MN, October 15, 2010** – Minnesota board certified laser surgeon Dr. Steven Shu has been performing lipoabdominoplasty, an advanced type of tummy tuck, for the last 6 months. His patients have loved their sculpted tummies and their quick recovery from surgery. Recently Dr. Shu has added the Vaser Liposculpturing techniques to the procedure making the results and recovery even better.

Lipoabdominoplasty is an advanced technique bringing significant change to the traditional tummy tuck in the United States. This procedure, which has combined liposuction with a new style of abdominoplasty, has allowed surgeons to transform patients' tummies after child birth and/ or weight loss into a beautiful shape.

Lipoabdominoplasty was first described by a Brazilian plastic surgeon Dr. Saldanha several years ago. The number of plastic surgeons employing lipoabdominoplasty in the United State is growing. This is a technique advised for more experienced surgeons as it requires combining liposuction with skin removal and muscle Tightening. Dr. Steven Shu adopted the technique of lipoabdominoplasty from Dr. Saldanha early this year. Since then, he has performed the procedure in several patients. Patient acceptance and satisfaction has been extremely high.

"Lipoabdominoplasty is clearly the procedure of choice for patients opting for tummy tuck", Dr. Shu said. "It offers a greatly improved abdominal appearance due to the aggressive liposuction and muscle tightening, a shorter, less noticeable scar for many patients, quicker recovery, and more security for riskier patients such as smokers or post weight loss patients."

Lipoabdominoplasty is often combined with liposuction of hips, back and extremities. This combination provides an ideal cosmetic surgery solution after weight loss, pregnancy, or aging.

Dr. Shu studied the Vaser liposculpturing technique with several of the nation's top plastic physicians, including Dr. Alfredo Hoyos, Dr. John Millard, and Dr. David Broadway of the Advanced Body Sculpting Institute, and he became the first cosmetic surgeon to perform the Vaser Hi Def LipoSculpturing in Minnesota. Using ultrasonic liposuction selectively emulsifies fatty tissue and maximizes fat extraction. This has allowed him to achieve even better sculpting and definition in the upper portion of the abdomen and has hastened patient recovery.

Dr. Shu is a board certified laser surgeon specializing in office cosmetic procedures. As the top proceduralist in the nation and a pioneer in office cosmetic procedures, he

performs numerous medical and cosmetic procedures or surgeries every year.

Shu Cosmetic Surgery Clinic is Minnesota's leading cosmetic care center, offering laser liposuction, Vaser Hi Def LipoSculpture, laser skin care, breast enhancement, blepharoplasty, face lift, tummy tuck, laser vaginal rejuvenation, vein care and injectables. All procedures and surgeries are performed in the office.
